

# Login with LinkedIn Account

## Add LinkedIn Client ID and Secret

Let us start creating client id and secret by visiting the [LinkedIn developers account](#):

Then, click on create application button:

My apps

Create an app

\* Indicates required

App name \*

demo test

LinkedIn Page \*

LinkedIn

Internet; 10,001+ employees

This action can't be undone once the app is saved.

The LinkedIn Company Page you select will be associated with your app. Verification can be done by a Page Admin. Please note this cannot be a member profile page. [Learn more](#)

Privacy policy URL

Begin with http:// or https://

App logo \*

This is the logo displayed to users when they authorize with your app

Upload a logo

Square image recommended. At least one dimension should be at least 100px.

Legal agreement

When you develop on our platform, you are agreeing to be bound by our [API Terms of Use](#).

☒ I have read and agree to these terms

LinkedIn

Internet Publishing; 10,001+ employees

Verify

This app is not verified as being associated with this company.

Update

their LinkedIn member data.

Widgets

If your app uses widgets you are required to add the domains where your widget is hosted. LinkedIn will validate and whitelist these domains.

Leave Feedback

Add Domains

Your linkedin app has been created; you will see the various tabs; however, you have to open the Auth tab. Here in the Application credentials section, you have to copy the Authentication keys to add to the app.

### OAuth 2.0 scopes

#### Understanding authentication and OAuth 2.0

In order for your applications to access LinkedIn member data and/or act on their behalf, they must be authenticated.

To make this process as easy as possible, LinkedIn relies on the industry standard OAuth 2.0 protocol for granting access.

Using [OAuth 2.0 tools](#) you can create new access tokens and inspect token details such as token validity, scopes.
